WEEK 3 · LESSON 17 OF 24 · HANDOUT

Using AI in Your Field

Study time: **about 45 minutes** (reading, video and activity)

Your goal in this lesson: Apply AI to real tasks in your own field — business, education, health, agriculture, public service, hospitality or technology — using a repeatable method.

The same tool, pointed at your work

General AI assistants become powerful when you point them at the **repetitive, time-consuming parts** of your own job. Here are examples from common fields in Rwanda.

By field

Small business and trade - Customer replies: *"Write friendly WhatsApp replies for these 5 common customer questions about delivery and prices."* - Marketing: product descriptions, promotions, simple flyers. - Planning: a simple monthly budget, pricing ideas, a checklist for opening a shop. - Customer service: a list of FAQs to pin in your WhatsApp Business profile.

Education - Lesson plans aligned with your topic and class level. - Practice questions at different difficulty levels, with answer keys. - Feedback on student writing using a rubric you provide (you make the final judgement).

Health (administration and information — not diagnosis) - Simple patient-information leaflets in plain language (checked by a qualified professional). - Appointment reminder messages and schedules. - Summaries of guidelines you are allowed to share.

Agriculture - Planting and spraying calendars; record-keeping templates. - Explaining market prices and simple cost-benefit calculations. - Photo-based crop disease apps as a first check — then confirm with an agronomist.

Public service and NGOs - Drafting reports, minutes and project proposals. - Turning long policies into plain-language summaries for citizens.

Hospitality and tourism - Multilingual guest messages, menus and tour descriptions. - Responding to online reviews politely and professionally.

A method that works in any field: F-I-T

1. **Find** the repetitive tasks — list what you do every week that takes time but follows a pattern.
2. **Instruct** — write a prompt template for each, with role, context and format.
3. **Test and track** — use it for two weeks, check quality, and note the time saved.

Know the limits in your field

Every field has tasks AI must **not** decide alone: medical diagnosis, legal judgements, grading final exams, approving payments, hiring decisions. AI can assist; a qualified human decides.

Remember this: Find the repetitive work in your field, give AI clear templates for it, and keep qualified humans responsible for decisions.

Name: _____ Date: _____

Activity

Task 1

Write down **5 weekly tasks** from your field (or the field you want to join).

Task 2

Pick the **2** most repetitive ones and write a prompt template for each.

Task 3

Test both templates on a real (non-confidential) example.

Task 4

Estimate the time each would save per month, and name one thing a human must still check.

Self-check

Think about your answers here, then take the quiz online — it is marked instantly and explains every answer.

1. Which part of your job is usually BEST to hand to AI?
   - A. Legal judgements
   - B. Repetitive, time-consuming tasks that follow a pattern
   - C. Medical diagnoses
   - D. Final decisions about people
2. What does the F-I-T method stand for?
   - A. Fast, Instant, Total
   - B. Fix, Ignore, Try
   - C. Find, Instruct, Test and track
   - D. File, Index, Type
3. In health settings, AI is appropriate for…
   - A. Diagnosing patients alone
   - B. Drafting plain-language leaflets that a qualified professional checks
   - C. Replacing nurses
   - D. Prescribing medicine
4. A teacher uses AI to give feedback on essays. What is the right approach?
   - A. Provide a rubric to AI, then make the final judgement yourself
   - B. Grade randomly
   - C. Never read the essays
   - D. Let AI give the final grade alone
5. A farmer's phone app suggests a crop disease from a photo. What next?
   - A. Post the photo online
   - B. Spray immediately without checking
   - C. Ignore all apps
   - D. Treat it as a first check and confirm with an agronomist
6. Why track time saved when you test AI in your work?
   - A. It is not useful
   - B. Because AI requires it
   - C. To show real value and decide what is worth keeping
   - D. To make reports longer
