WEEK 4 · LESSON 21 OF 24 · HANDOUT

AI and the Future of Work

Study time: **about 40 minutes** (reading, video and activity)

▶ **Watch:** https://www.youtube.com/watch?v=hQX_wIW9Nh0 — open the lesson online to watch inside the course.

Your goal in this lesson: Understand how AI is changing jobs, identify the skills that grow in value, and plan how to stay employable.

Tasks change before jobs do

AI rarely replaces a whole job at once. It changes the **tasks** inside jobs. An accountant may spend less time typing entries and more time advising clients. A teacher may spend less time making worksheets and more time supporting individual learners. A marketing assistant may produce first drafts in minutes and spend more time on strategy and customer relationships.

The question to ask is not *"Will AI take my job?"* but **"Which of my tasks will change, and what will I do with the time?"**

Three groups of tasks

Group	Examples	What happens
Automated	Routine data entry, first drafts, simple summaries	AI does much of it
Augmented	Analysis, writing, research, design, customer service	People + AI do it faster and better
Human-led	Leadership, care, negotiation, trust, complex judgement, hands-on skilled work	Stays mainly human, AI supports

The safest place to be is **augmented** and **human-led** work — and the most valuable worker is the one who can do their job **with** AI.

Skills that grow in value

- **AI literacy** — using AI tools well and checking their work (this course!).
- **Critical thinking** — judging quality, spotting errors, asking good questions.
- **Communication** — explaining clearly to people, in several languages.
- **Problem solving and creativity** — framing problems AI cannot frame by itself.
- **Domain expertise** — deep knowledge of your field and of the Rwandan context.
- **Collaboration and emotional intelligence** — trust, empathy and teamwork.
- **Learning how to learn** — tools change every year; fast learners keep up.

Opportunities in Rwanda

AI also **creates** work: helping businesses adopt AI tools, creating local-language content and data, training others, building digital services, and using AI to start small businesses with low costs. People who combine **AI skills with local knowledge** are in a strong position.

Staying employable: a simple strategy

1. **Learn** — keep building AI and digital skills every month.
2. **Apply** — use AI on real tasks and measure the results.
3. **Show** — make your skills visible with a portfolio and clear examples.
4. **Connect** — join communities, events and online groups in your field.

Remember this: AI changes tasks first; people who combine AI skills, human skills and deep field knowledge become more valuable, not less.

Name: _____ Date: _____

Activity

Task 1

List 10 tasks in a job you have or want.

Task 2

Mark each as **Automated**, **Augmented** or **Human-led**.

Task 3

For the augmented tasks, write how you would do them with AI.

Task 4

Choose **two skills** from the list above you will develop in the next 3 months, and one action for each.

Self-check

Think about your answers here, then take the quiz online — it is marked instantly and explains every answer.

1. According to this lesson, what does AI usually change first?
   - A. Whole jobs overnight
   - B. Only government jobs
   - C. The tasks inside jobs
   - D. Nothing at all
2. Which task is most likely to be AUGMENTED (people + AI together)?
   - A. Leading a team through a crisis
   - B. Comforting a grieving family
   - C. Writing and analysing a market report
   - D. Physically repairing a water pipe
3. Which skill grows MORE valuable as AI spreads?
   - A. Typing speed only
   - B. Memorising long lists
   - C. Avoiding new tools
   - D. Critical thinking and checking quality
4. What is the better question to ask about your career and AI?
   - A. Which AI is the most expensive?
   - B. Which of my tasks will change, and what will I do with the time?
   - C. Will AI take my job?
   - D. When will AI disappear?
5. Why are people who combine AI skills with local knowledge in a strong position?
   - A. Because they never need to learn
   - B. Local knowledge is not useful
   - C. AI tools often lack local context, so people who provide it add real value
   - D. Because AI only works in Kigali
6. What are the four steps of the staying-employable strategy?
   - A. Read, Sleep, Repeat, Rest
   - B. Learn, Apply, Show, Connect
   - C. Wait, Hope, Ask, Copy
   - D. Buy, Install, Update, Delete
